Firm No. 0022.0063

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims**

1. (Currently Amended) A method for throttling data transfer, comprising:  
determining an amount of resources that are in use;  
when the amount of resources reaches a high threshold, notifying one or more primary control units to temporarily stop sending data by sending a message; and  
when the amount of resources reaches a low threshold, notifying each previously notified primary control unit to resume sending data by sending a message.
2. (Original) The method of claim 1, wherein all primary control units are notified to temporarily stop sending data.
3. (Original) The method of claim 1, further comprising:  
at a primary control unit, resuming sending data after a predetermined period of time has expired without receipt of notification to resume sending data.
4. (Original) The method of claim 1, further comprising:  
when the amount of resources used is above a final threshold, re-notifying the one or more primary control units to temporarily stop sending data.
5. (Original) The method of claim 1, wherein at least one of the resources is a cache.
6. (Original) The method of claim 1, wherein the amount is measured by a percentage.
7. (Original) The method of claim 1, wherein the one or more primary control units that are notified to temporarily stop sending data are selected based on an amount of resources being used by each primary control unit.

Serial No. 10/719,129  
Docket No. TUC920030145US1  
Firm No. 0022.0063

8. (Original) The method of claim 7, further comprising:  
maintaining information on the amount of resources being used by each primary control unit.

9. (Currently Amended) An article of manufacture including a program for throttling data transfer, wherein the program causes operations to be performed, the operations comprising:  
determining an amount of resources that are in use;  
when the amount of resources reaches a high threshold, notifying one or more primary control units to temporarily stop sending data by sending a message; and  
when the amount of resources reaches a low threshold, notifying each previously notified primary control unit to resume sending data by sending a message.

10. (Original) The article of manufacture of claim 9, wherein all primary control units are notified to temporarily stop sending data.

11. (Original) The article of manufacture of claim 9, wherein the operations further comprise:  
at a primary control unit, resuming sending data after a predetermined period of time has expired without receipt of notification to resume sending data.

12. (Original) The article of manufacture of claim 9, wherein the operations further comprise:  
when the amount of resources used is above a final threshold, re-notifying the one or more primary control units to temporarily stop sending data.

13. (Original) The article of manufacture of claim 9, wherein at least one of the resources is a cache.

14. (Original) The article of manufacture of claim 9, wherein the amount is measured by a percentage.

Serial No. 10/719,129  
Docket No. TUC920030145US1  
Firm No. 0022.0063

15. (Original) The article of manufacture of claim 9, wherein the one or more primary control units that are notified to temporarily stop sending data are selected based on an amount of resources being used by each primary control unit.

16. (Original) The article of manufacture of claim 15, wherein the operations further comprise:

maintaining information on the amount of resources being used by each primary control unit.

17. (Currently Amended) A system for throttling data transfer, comprising:  
means for determining an amount of resources that are in use;  
means for when the amount of resources reaches a high threshold, notifying one or more primary control units to temporarily stop sending data by sending a message; and  
means for when the amount of resources reaches a low threshold, notifying each previously notified primary control unit to resume sending data by sending a message.

18. (Original) The system of claim 17, wherein all primary control units are notified to temporarily stop sending data.

19. (Original) The system of claim 17, further comprising:  
at a primary control unit, means for resuming sending data after a predetermined period of time has expired without receipt of notification to resume sending data.

20. (Original) The system of claim 17, further comprising:  
when the amount of resources used is above a final threshold, means for re-notifying the one or more primary control units to temporarily stop sending data.

21. (Original) The system of claim 17, wherein at least one of the resources is a cache.
